### Wages and Inflation

Laura Pilossoph

Federal Reserve Bank of New York

Jane Ryngaert

University of Notre Dame

June 2022

#### Deutsche Bundesbank and Banque de France Joint Spring Conference 2022

"Wage-price dynamics are among the myriad uncertainties in the economy that bear close watching and demand great caution from monetary policymakers as we recalibrate our policy." - Raphael Bostic, May 2022

"It's a risk that we simply can't run. We can't allow a wage-price spiral to happen. And we can't allow inflation expectations to become unanchored. It's just something that we can't allow to happen." - Jerome Powell, May 2022

- Higher prices  $\rightarrow$  higher wage demands  $\rightarrow$  higher prices
- Getting a raise takes some action on the part of the employee.
  - Makes sense for worker to account for both inflation experience and inflation expectation.
- On-the-Job Search
  - Associated with wage growth and inflation: Faberman and Justiniano (2015), Moscarini and Postel-Vinay (2017), Karahan et al. (2017), Faccini and Melosi (2022)
  - Also particularly efficient relative to search of the unemployed: Faberman et al. (2022)

- Expected inflation  $\rightarrow$  expected decline in real wage.
- Search  $\rightarrow$  offers and counteroffers.
  - Suitable match could take time.
- Do higher inflation expectations lead to on-the-job search?

- Expected Inflation and Labor Search
  - Employed workers with higher inflation expectations are more likely to search for new work.
  - No relationship between expected inflation and search of the non-employed.
- Expected Inflation and Labor Market Outcomes
  - Higher inflation expectations correlated with subsequent job-to-job transition.

- Employed Search, Job-to-Job Transitions, and Inflation
  - Faberman and Justiniano (2015), Moscarini and Postel-Vinay (2017), Karahan et al. (2017), Faccini and Melosi (2022), Faberman et al (2022), Cahuc, Postel-Vinay, and Robin (2006)
- Inflation Expectations and Consumer Spending:
  - Bachmann, Berg, and Sims (2015); Duca-Radu, Kenny, and Reuter (2019); Coibion, Georgarakos, Gorodnichenko, and van Rooij (2021), D'Acunto ,Hoang, and Weber (2016, 2018); Burke and Ozdagli (2021); Dräger and Nghiem (2021); Crump, Eusepi, Tambalotti, and Topa (2022); Ryngaert (2022)

- Monthly survey run by the Federal Reserve Bank of New York.
  - Includes questions about macroeconomic expectations.
  - Labor Market Supplement includes questions about labor search
- Nationally representative rotating panel of households heads. ( $\sim$  1300 per month)
  - Households can stay in the survey up to 12 months.
- Sample runs from February 2014 to November 2019
  - Drop the early Covid period

	Employed	Not Employed
Searching (for new work)	15.3 (0.4)	13.0 (0.3)
Not Searching	78.7 (0.5)	87.0 (0.6)

#### **Point Forecasts**

What do you expect the rate of [inflation/deflation] to be **over the next 12 months**? Please give your best guess.

### **Density Forecasts**

Now we would like you to think about the different things that may happen to inflation over the **next 12 months**. We realize that this question may take a little more effort.

In your view, what would you say is the percent chance that, over the next 12 months...

the rate of inflation will be 12% or higher, between 8% and 12%, between 4% and 8%, between 2% and 4%, between 0% and 2%  $\dots$ 

### Fitting Method

- Modification of method of Engelberg, Manski, and Williams (2009).
- Pin the mode of the distribution to the point forecast.

- Use the implied mean of this distribution as measure of expected inflation.
- Winsorize and drop observations where the point and density forecasts are inconsistent with one another.

# Average Inflation Expectations

Pilossoph and Ryngaert

### Searching Not Searching p-value for equality of means

Employed	3.68	3.44	0.01
Not Employed	3.87	3.83	0.43

$$search_{i,t+1} = \beta E_{i,t}[\pi] + \delta x_{i,t} + u_t + \epsilon_{i,t}$$

### Controls

- Demographic: Education, income, age, census region, numeracy, marital status, parent, race, labor force status
- Macroeconomic expectations: unemployment, interest rates, stock prices
- Labor market expectations: probabilites of receiving offer, counter, job loss and finding expectations

# Inflation Expectations and Search of the Employed

**On-the-Job Search** 

Coefficient Marginal Effect

$E_{i,t}[\pi]$	0.0360*** (0.0098)	0.0066*** (0.0018)
<i>E<sub>i,t+1</sub></i> [ <i>Prob. Offer</i> ], (0 - 100)	0.0131*** (0.0012)	0.0024*** (0.0002)
$E_{i,t+1}$ [Number of Offers],	0.2731*** (0.0288)	0.0498*** (0.0053)
<i>E<sub>i,t</sub></i> [ <i>Prob. Job Loss</i> ], (0 - 100)	0.0085*** (0.0012)	0.0015*** (0.0002)

# Inflation Expectations and Search of the Non-Employed

	S	earch
	Coefficient	Marginal Effect
$E_{i,t}[\pi]$	-0.0068 (0.0193)	-0.0005 (0.0014)
<i>E<sub>i,t+1</sub></i> [ <i>Prob. Offer</i> ], (0 - 100)	0.0146*** (0.0022)	0.0011*** (0.0002)
$E_{i,t+1}$ [Number of Offers],	0.1948*** (0.0471)	0.0146*** (0.0036)

- Do higher inflation expectations cause search?
- Does search drive up inflation expectations?
- People seeing wage offers higher than their current wage may attribute to inflation rather than increased productivity.

### Address Timing

- Inflation expectations are collected at beginning of the search period.
- Include lags and leads of expectations to clarify the timing of the expectations that matter for search.

	On-the-	Job Search
	Coefficient	Marginal Effect
$E_{i,t-1}[\pi]$	-0.0162 (0.0129)	-0.0028 (0.0023)
$E_{i,t}[\pi]$	0.0498*** (0.0134)	0.0087*** (0.0023)
$E_{i,t+1}[\pi]$	0.0071 (0.0127)	0.0012 (0.0022)

	On-the-	Job Search
	Coefficient	Marginal Effect
$E_{i,t-2}[\pi]$	0.0006 (0.0153)	0.0001 (0.0026)
$E_{i,t-1}[\pi]$	-0.0065 (0.0145)	-0.0011 (0.0025)
$E_{i,t}[\pi]$	0.0370** (0.0157)	0.0063** (0.0027)

	On-the-	Job Search
	Coefficient	Marginal Effect
$E_{i,t}[\pi]$	0.0362*** (0.0122)	0.0064*** (0.0022)
$E_{i,t+1}[\pi]$	-0.0148 (0.0126)	-0.0026 (0.0022)
$E_{i,t+2}[\pi]$	0.0144 (0.0131)	0.0026 (0.0023)

- Expected inflation may prompt search, but does this yield changes in employment situations?
- Look at job-to-job transitions in the labor market supplement after the initial search question.

### Job-to-Job Transition

• Dummy variable equal to 1 if a previously employed respondent is at a new employer ( $\approx$  3%).

*Transition*<sub>*i*,*t*+5</sub> = 
$$\beta E_{i,t}[\pi] + \delta x_{i,t} + u_t + \epsilon_{i,t}$$

### Controls

- Demographic: Education, income, age, census region, numeracy, marital status, parent, race, labor force status
- Macroeconomic expectations: unemployment, interest rates, stock prices
- Labor market expectations: probabilites of receiving offer, counter, job loss and finding expectations

• Model on-the-job search with wages bargained in nominal terms.

- Employees match to outside offers with some probability.
- Nominal wages can be re-bargained with a credible threat.
- Wages depend on:
  - Productivity at the current firm and the current price level.
  - Negotiation Benchmark:
    - Productivity of latest match.
    - Price level at the time of the latest match.

▶ Conclusion

- Inflation expectations positively linked with the search and job-to-job transitions of employed workers.
- Does it matter?

- Inflation expectations positively linked with the search and job-to-job transitions of employed workers.
- Does it matter?
- Maybe

- Inflation expectations positively linked with the search and job-to-job transitions of employed workers.
- Does it matter?
- Maybe
  - As average inflation expectation goes up, will we see an uptick in number of searchers?
  - Do matches with higher nominal wages result in higher productivity as well as wages?
  - Is some part of these raises inflationary?

- Inflation expectations positively linked with the search and job-to-job transitions of employed workers.
- Does it matter?
- Maybe
  - As average inflation expectation goes up, will we see an uptick in number of searchers?
  - Do matches with higher nominal wages result in higher productivity as well as wages?
  - Is some part of these raises inflationary?

• In progress: Model with endogenous search in which inflation incentivizes search.
